Many precious metals long investors have waited so many years to be rewarded for their choice they're at the threshold of their later life stage. Many others actually have passed on, some back in the early 1980s. The Medical Colossus appears set up to be the final blow that reduces the middle class to serf status; to deny children a parental inheritance; and to prevent capital formation outside the "right" circles. I suggest all to review the linked article following. It's quite well-argued---

<https://market-ticker.org/akcs-www?post=231949>

The Bill To Permanently Fix Health Care For All in [Market-Ticker]

<https://market-ticker.org/akcs-www?post=231949> ▾

2017-03-30 09:57 by Karl Denninger ... Any medical provider who attempts to bill any service or product above that price to a person in exigent circumstances ...

What I want to do here is to help some to sidestep the Medical Colossus draining away their wealth. I want to focus on the most common health conditions that enable the Medical Colossus to cart

wealth away pillaging, raiding and plundering to add to its vast storehouses of pirated funds. Costs for the three biggest killers can be seriously reduced by simple modalities. For avoidance of cardiovascular disease, to include calcified arteries and weakened artery walls; read about Vitamin K-2; fresh lemon juice in plain water on empty stomach; taurine; copper; carnosine; botanicals such as hawthorn berry, blueberry, pomegranate, garlic oil and many others--- horse chestnut and butcher's broom for arterial wall health. In October 2009 I released "Living to Enjoy My Silver" <http://nosilvernationalization.org/98.pdf> which is my personal account of using lemon juice in plain water to restore my arteries which were calcified. I also had an incipient aneurysm which I could unmistakably feel under my right collarbone. It resolved with use of horse chestnut and butcher's broom, herbs with vasoconstrictive properties. I didn't get printed medical verification as I feared I might be involuntarily sedated and operated on and left with a bill so they could buy the entire state of Arkansas.

High calcium intake and little of leafy green vegetables eventually means calcified arteries. Lemon's acidity with repeated use dissolves arterial calcium, whereas Vitamin K-2 "redirects" calcium to places it's needed, especially the bones. There is no basis to use EDTA treatments; they're costly and rob the body of all minerals when all you need is to get calcium out of blood vessels. Medical people harm the elderly with warfarin which causes increase in arterial calcification. Natural blood thinners---garlic, ginkgo, taurine and fish oil? No way pal! They only treat by inducing other conditions to manifest, which can then be treated with more "harmaceuticals" to bloat their profit stream. Medical personnel harm the elderly with lasix which causes nutrient depletion of electrolyte minerals and thiamine, leading to dehydration, weakness and heart failure. They seldom even mention replacement of these critical nutrients depleted by their demon diuretic drug.

We can yammer all day long about “anecdotal” and non peer reviewed reports! I have no motive to mislead anyone and am not trying to access your money. I am trying to prevent you from being injured by those who selfishly won’t tell you about these wonder working substances because they are after your money! ***The more you hear and read the word “clinical” the more you know your money is the prime target!*** Pharma is set up so that all its “medications” cause multiple side effects. Doctors then prescribe other “medications” to “manage” those side effects. When the spinning merry go round stops, the patient’s wealth if they had any is gone and they are moved to a cemetery. Food really is the best medicine. However, there’s the problem of mineral depleted soils and adequate nutrient doses being too difficult to obtain by diet alone. There is this drive to make nutritional supplements available by Rx only. This is a hideously sinister and horrifying conspiracy of greed. Give us your entire net worth or die!

For cancer, the big bugaboo, please don’t fall prey to ideas of a multiplicity of substances. Over 100 substances from plants are advocated as cancer fighters. You should follow better health practices; avoidance of tobacco and environmental toxins to the extent possible (I hold my breath while pumping gas). It’s telling how many people are quick to use things like Round Up weed killer by Monsanto, and now there are how many cancer patients due to this? All they ever needed to do was pull weeds by hand, use a garden hoe or pour boiling water on weeds! For elimination of toxins from the body, the liver is boosted by reduced glutathione and calcium D glucarate; probably best to use on different days. Milk thistle by itself will not fight cancer; it will however add to the liver’s health, as will drinking lemon water. Do not add any third substance of any description to lemon water; and the teeth must be rinsed well afterwards.

How do cells divide? In briefest and simplest terms, iron must be available for cell division. In cancer, cell division is in a runaway condition and the cells have no purpose other than to eventually kill the host! Cancer cells have from 12 to 20 times more “iron receptors” on their surface than normal cells. There are two substances that interfere with cancer’s need for and use of iron. If cancer can’t get iron; or if iron is turned against cancer, cancer stops growing. Otherwise by itself cancer’s only natural off switch is the death of the host. Benign cancer sometimes turns malignant. The longer surgery is delayed to remove a growth, the more chance it will turn malignant.

You don’t poison cancer with an apricot extract similar to cyanide! You damage it with free radicals without injuring healthy cells and you starve it (not ketogenics!)

Those two substances that interfere with cancer’s use of and need for iron are artemisinin and lactoferrin---or lactoferrin and artemisinin. There may be some low risk of liver stress with artemisinin long term. In the presence of high iron concentrations as in tumors, artemisinin causes a burst of free radical damage. Normal cells don’t have enough iron for this damaging reaction. Artemisinin is a smart bomb against cancer. Lactoferrin (from cows) on the other hand, soaks up so much iron that tumors are starved for iron and eventually die. The blood vessels feeding them wither under lactoferrin bombardment. Artemisinin, also known as wormwood, is a botanical substance. ***It is so powerful that all other plants should be disregarded as poor jokes;*** you may be lured into the trap of slowing rather than halting cancer. Many plant substances are touted for cancer; a few are curcumin, so-called B-17 (laetrile or amygdalin), cinnamon, boswellia, ginger, cranberry, dandelion, burdock, fucoidan (seaweed), serrapeptase, piperine, fisetin, green tea, garlic, ginseng, organic apple peel, olive leaf, astaxanthin, vitamin C, mushrooms, sulforaphane, shark cartilage, enzymes et cetera. Please don’t fall victim to using these substances

against cancer. They are weak, feeble old men next to artemisinin or lactoferrin! Turn iron against cancer---kill cancer. Or deny iron to cancer---starve cancer. It's as simple as no gas, no automobile. That said, we must note that 1) administration must be timely (early stage is always best, as is cancer surgery) and 2) dose must be adequate (read about artemisinin and lactoferrin) and 3) dosing must be persistent---continue for a full year after remission is diagnosed. Some take additional iron several hours before taking artemisinin. This may be a useful idea. Take no extra iron with lactoferrin or you could hinder it. If using lactoferrin, consider going off beef and eat more chicken (one third the iron content of beef) to intake less iron.

Lactoferrin and artemisinin should be given with a good quality fish oil (one not shipped in hot weather; this applies to all supplements) and on an empty stomach with some filtered water free from chlorine. Twice a day is advisable. There is no basis to take artemisinin and lactoferrin together---the lactoferrin will protect the cancer from some damage caused by artemisinin; while eventually killing the tumor by denial of iron for cell division. You could take them together but

alternating every two or three weeks is better. If you initiate with artemisinin, and switch to lactoferrin, you'll be starving an injured tumor. Never take antioxidants with artemisinin---they will to some extent protect the cancer from the damage you want artemisinin to cause in the neoplastic (undifferentiated) cells. While using lactoferrin or artemisinin, at some other time of the day, you could consider taking lysine, which may be able to shield surrounding tissue/organs from invasion by cancer. Tumors secrete metalloproteinases, enzymes that allow penetration of healthy tissue/organs---lysine helps to resist this invasion.

<https://scialert.net/fulltext/?doi=ijds.2011.79.111>

If using lactoferrin you sure could take various antioxidants; never with wormwood (artemisinin). I'd just leave off the antioxidants however, till remission is diagnosed. It's folly to confide in any MD you're trying any non Rx substance! They'll start raving about "expensive urine"

while they “Seig heil” to a regiment of Pharma interests that buy them vacations. You can try taking hot baths, as tumors aren’t able to tolerate heat as well as normal tissue. That would be a faint distant adjunct to taking lactoferrin or artemisinin. Steamy baths and showers are likely to have you inhaling more chlorine fumes; these are antagonistic to joint cartilage and the heart as well as carcinogenic. Only people with whole house chlorine filters should take hot baths. I know identical twins aged 62. One had hip replacement surgery after a lifetime of taking two long hot steamy showers every day, taking chlorine vapors into his lungs. The other took lukewarm baths producing no steam---his hip cartilage is in great condition. Instead try dry heat on a growth (hand held hair dryer/heating pad) but realize this is only a secondary treatment. If a growth is just below the skin, you might think over using a topical skin penetrating solvent like DMSO to directly transfer artemisinin (white powder) into the abnormal tissue.

You can read studies on lactoferrin and artemisinin at Pub Med, National Institutes of Health. Researchers investigating these are working for Pharma interests and know average persons will never read the studies. They’d actually let you die rather than tell you something cheap may powerfully help you. They seriously expect people to sit on their hands and wait until these two iron factors antagonistic to cancer can be synthetically modified so they can be patented---at which point, you’ll be looted of finances to get such Rx items. However, lactoferrin and artemisinin ALREADY work! A certain well known fellow made a commitment years and years ago to Vitamin B-17, which is actually not a vitamin. He sells books on the subject. He has no interest in any admission now that lactoferrin and artemisinin are as superior to B-17 as satellite weapons are to old antique flintlock rifles! Baking soda is touted as a cancer fighter. Beware! You may sustain kidney damage! Baking soda has valid topical uses. I have NO financial interest in play in describing iron factors artemisinin and lactoferrin to you! I don’t have any book to take up for! ***Laetrile is known to cause symptoms of***

cyanide poisoning. Base your survival on facts not some senseless popularity ranking. **People not after your money have your highest interests in mind!** I am not after your money! This “red pill” popularity cult figure makes no mention of lactoferrin nor of artemisinin in his book nor any mention of how dependant cancer is on iron intake https://www.amazon.com/World-Without-Cancer-Story-Vitamin/dp/0912986190#reader_0912986190 He wants \$77.34 for a hard cover version of his woefully outdated book. For that you can get a nice amount of artemisinin or lactoferrin and I won’t see a cent of your MONEY! I get no promotional fees from any sellers and don’t recommend any particular sellers. I want to help you for the satisfaction of knowing I enabled some to sidestep the Medical Colossus ripping them off for vastly inferior cancer treatments. I enjoy thinking I am subtracting income from the Medical Colossus.

<https://link.springer.com/article/10.1007/s13238-014-0119-z>

**“LACTOFERRIN CAN GREATLY INHIBIT
CELL PROLIFERATION.”**

The article mentions a herd of Pharma items and fails to mention artemisinin and doesn't specifically recommend patients take lactoferrin, **after admitting it has huge anti-cancer power!**

Artemisinin, the Magic Drug Discovered from Traditional Chinese ...

Artemisia Annua, Artemisinin & 2015 Nobel Prize in Medicine – A Cancer Fighting Plant

Artemisinin can be very effective because it selectively affects tumor cells without harming normal cells. This is because Artemisinin affects only cells that contain excessive amounts of iron which is the case for cancer cells. Indeed, via specific receptors cancer cells are demanding and depositing large amounts of Iron as they need it for cellular division. When coming in contact with Iron, Artemisinin triggers the release of intracellular free radicals that destroy cells.

Indeed, Artemisinin was shown to cause the arrest of cell growth and apoptosis in several tumor cell lines. As we will discuss below, besides the ample science behind there is a very large number of anecdotal reports coming from all over the world and supporting Artemisinin and the whole plant *Artemisia annua* as a cancer solution. For example, *Artemisia annua* is widely used in countries such as Romania (where they call it "pelin") or Italy and there are constant positive reports coming out of those countries.

Artemisia annua is a plant that is very cheap and available almost everywhere. This is why people will tend to use the whole plant more than the extract Artemisinin. And this is probably better since the whole plant contains more anticancer substances such as Scopoletin. Recently, it has been reported that Scopoletin can be found in high amounts in *Artemisia annua*, it is better absorbed in the human body and is known for its cytotoxicity towards cancer cells. (Ref.) Next to Scopoletin there are other substances with anti cancer action as well. (Ref.) As a side note, I was just reading now an article coming to my e-mail box by chance, and indicating that Noni fruit is rich in Scopoletin.

Artemisinin is “very cheap,” why start out of a \$77.34 hole for really bad advice from a popularity deity? I won’t recommend any brands so you’ll know I am not after your money; I’d like to help hard money people last longer to help revert the nation to better financial practices. I noticed an EBAY seller offering 810 artemisinin capsules of 425 milligrams each, delivered, for the price of his misguided book. His advice is bad and should be steered clear of as far as possible. Amygdalin gets converted into cyanide which lowers cellular oxygen levels! Elsewhere we read that cancer thrives in low oxygen! (Don’t focus on oxygen nor on sugar; focus on IRON). Olive wreath wearing popularity deities showing up in chariots surrounded by singing slave maidens can be wrong and he sure is wrong. Don’t add to the bulge in his pockets! Buy these iron factors instead which he has never mentioned to his adoring followers! I do believe laetrile can harm cancer cells; the issue is, it can also harm normal cells. It is not exploiting cancer cells being different from normal cells as artemisinin and lactoferrin exploit this difference! ***If a mosquito lands on you, you don’t walk into flames to get rid of it.***

Brendan Brogan had already eaten about 40 dried apricot kernels when he saw the label on the back of the bag that eating more than a couple can result in cyanide poisoning. (Submitted by Brendan Brogan)

Long ago I read the book “The Fearful Master A Second Look at the United Nations” and it remains a fine scholarship *insofar as it went*. However as my own information progressed I realized he said nothing about the U.N. like the League of Nations (Viscount Cecil of Chelwood, Pilgrims Society) before it, being a British Empire instrumentality; and nothing about Wall Street Episcopalians, Pilgrims Society members, running the United Nations Association. He didn’t mention L. Revere Crandall the construction and engineering magnate who built the U.N. building being a Pilgrims Society member nor that John D. Rockefeller Jr. who donated the land for the U.N. building was also a Pilgrims member. And on and on. But how could he mention information beyond his reach? His Federal Reserve book makes zero mention of The Pilgrims Society. For FREE details on Pilgrims Society creation of the FED see <http://nosilvernationalization.org/128.pdf> I am an undesirable character since I never charge anyone a cent to view my research! A very bad boy indeed for making knowledge free! You Tube

interviewers and their guests have one big objective---to squeeze as much money as possible from listeners. Crandall and Rockefeller---

Many botanicals are alleged to induce apoptosis (programmed cell death) in cancer. There is some truth to this; but please forget it! Just turn iron against cancer, and/or starve cancer of iron. Forget about ketogenic diet for cancer---it may be good for weight loss and cardiovascular however. Just interfere with IRON, OK? That's the simplest and the BEST approach! And the cost is very modest! If you were wrestling with an opponent, would you rather shut off his calories or his oxygen? Ketogenic is in a craze and many are being misled away from the two iron factors. Ketogenic promoters have a commitment to their lesser theory and their financial picture depends on people buying into it. I have no income at stake describing artemisinin, lactoferrin and lysine!

The cancer therapeutics market (exclusive of surgery) in 2017 was \$172.6 billion worldwide <https://www.prnewswire.com/news-releases/the-global-cancer-therapeutics-market-should-reach-1726-billion-by-2022-from-121-billion-in-2017-at-a-compound-annual-growth-rate-cagr-of-74-from-2017-to-2022-300556172.html>

Artemisinin and lactoferrin if turned to by the masses would cut this number down to below one billion and probably under \$500 million.

The first tenet of the cancer industry is treatment, not cure; and treatment must soak up the patient's entire net worth, leaving survivors with no inheritance. TV commercials prey on people's sense of compassion raking in millions for Danny Thomas St. Jude Hospital. Will they mention artemisinin or lactoferrin? Absolutely not---that would take donations down by 99%. They are the same sort of mask wearing scoundrels as the Humane Society of the United States, American Society for the Prevention of Cruelty to Animals, Texas "Humane" Legislation Network and other pretenders to good deeds whose main concern is to keep the MONEY coming in. This last group claims credit for ending gassing of shelter pets in 2013 and doesn't disclose to donors that in 2011 they defeated a bill that would have ended gassing two years sooner. Cancer Treatment Centers of America wants nothing to do with any cheap cancer stoppers that are available without a prescription. Neither do all the mega-hospitals coast to coast. They need huge expenditures for cardiovascular, cancer and diabetes treatments.

Use artemisinin and alternate with lactoferrin to beat cancer. These cause no hair loss nor any of the long list of disheartening side effects of chemotherapy. Note this is my OPINION and anyone can have an opinion.

If you've silver mercury amalgam fillings, consider having them removed and replaced with safer materials. Until then, you should take selenium for continual detox. Drinking hot liquids is likely to release more mercury into your system. Colloidal silver for infections is frankly inferior to garlic. If used too much, colloidal silver will cause permanent graying of the skin, known as Argyria. This does not make me a "traitor to silver" to so state. It remains true that pioneers used to toss a silver dollar into a pail of milk and that helped it to last longer. Today refrigeration, canning and evaporation makes it last longest.

Diabetes! Generations ago the sugar refining industry lobbied the medical profession to stop speaking of “sugar diabetes” and instead to say only “diabetes.” Any lowering of sugar intake as in soft drinks, candy, pastry, ice cream, is a plus. Artificial sweeteners are neurotoxic and worse than sugar. Thiamine (Vitamin B-1), a good magnesium like magnesium aspartate, are good for sugar management, as is alpha lipoic acid and Ceylon cinnamon. You can actually get away with having cinnamon toast flavored with brown sugar or honey, when lots of cinnamon is used. Use “true” cinnamon, not the cheaper “Saigon cinnamon.” A benefit of sugar reduction, including honey and other “natural” sweeteners, is less tooth decay. Take Vitamin K-2 also to help the teeth. Over the decades Pilgrims Society members held probably more than one hundred board seats on sugar producers and refiners. These people are all over big New York and other hospital boards.

Some say to pulverize eggshells, ingest it, and after an hour, take a solution of comfrey root into your mouth, to heal cavities. There may be some grain of reality to this, but be warned---comfrey is known to incite liver damage. Yes they say to spit it out; you still absorbed some of it. According to info, in 2012 at Columbia University Dental Lab, Dr. Jeremy Mao achieved the regeneration of a fully formed natural tooth in a socket where a tooth was lost. A “scaffold” was installed and injected with growth factors that attracted stem cells. On arrival, the stem cells could sense their surroundings and this signaled to them what type of tissue to become. I have wondered if implantologists have collaborated to suppress release of this to the public. The process takes only 63 days and a functional tooth is grown---like alligators that can regrow lost teeth.

Older folks are often on diuretics like lasix (furosemide). Beware! This can cause “drug induced nutrient depletion.” Thiamine is lost this way, causing heart weakness; electrolyte minerals like magnesium are also depleted; and glutathione, vital to life. **Many doctors and nurses**

appear as ignorant as a drunk, three toed moron on the subject of drug induced nutrient depletion. Case in point---an elderly woman receiving nutritional boosters, at past age 90 and overweight, was able to stand 60 nonstop repetitions from a wheelchair, using an assistance bar. After nine days of diuretic barrage, her ability to stand fell from 60 to FIVE! “The test show normal” crowed the doctor’s assistant! Diuretics cause drop in blood pressure and dehydration. Lots of cautions apply with diuretics, and the medicos are so awfully ignorant at times. They do not administer “medications;” they foist pharmaceutical drugs because they are Pharma prostitutes. Just thinking about grinning jackass “Doctor” Richard Pan who wants to turn children into Pharma pincushions is like having stinging ants crawling all over your body. He is to California what British opium dealers were to 1800s China.

Infections internal and external will often respond to high doses of garlic oil softgels. Oil of oregano may be taken in softgels with garlic and may be synergistic. Effect may be blunted if taken with a meal. Vitamins A and C also help against infections. This doesn’t necessarily exclude resorting to antibiotics however. I haven’t had any sort of vaccination in decades and haven’t contracted any illnesses due to avoiding these Little Devils. Strong coffee without sugar gives gout relief faster than any scum-sucking pharmaceutical and at far cheaper cost. Use topical roll-on DMSO with aloe vera to relieve gout. There is a potential concern that too much DMSO use could cause the lens of the eye to become cloudy; use it sparingly. I used DMSO on a blind dog I had who was suffering from spinal gout (not diagnosed by two veterinarians) and since he was blind his lens was of no concern, but he walked well after 20 minutes where before he couldn’t stand. DMSO is used by boxers to lessen soreness and is all over horse racing and greyhound racing tracks.

The dead? No, I know of nothing that will raise them. But these few choice, potent, inexpensive substances can shield you against cardiovascular disease, cancer and diabetes, such that the Medical Colossus won't get to suck your finances dry. Your expenses should be reduced by more than 99 percent. Lactoferrin and artemisinin also strongly apply to cancer in pets. A product for pets called "Apocaps" is on the market. It contains neither of these cancer wrecking iron factors so---avoid Apocaps like the plague. Again, another product made by someone with his own commitment to pocketing money and the fact of it not being best treatment? Tough for those being misdirected. He doesn't care.

Lactoferrin comes from cows. Don't confuse it with milk, whey, butter or colostrum. Colostrum however is a fine healer though pricey. The best time to buy lactoferrin or artemisinin is in cooler weather. The reason being, you can't be certain something wasn't exposed to excess heat in shipment. If starting in warm weather, disregard this and buy immediately---most likely it's potent. Check ratings on sellers and brands. Don't substitute colostrum for lactoferrin when confronted with cancer!

Disclaimer---I am not a medical doctor; do your own due diligence; spend time reading about these recommended substances before using. Use best judgment---get from doctors the good you can, and from nature, the good it has to offer. Diluted lemon juice renovated my arteries after six months of twice daily dosing! The citric acid content is very corrosive towards arterial calcium; so---for this reason, never leave it on teeth without rinsing. Notice I said diluted---not straight. Even 50 parts water to 1 part lemon juice is effective. Take away from meals. Expect no results without six months of persistence. You can get arteries checked out first, return later and be evaluated again. Refuse to tell the medico what you did! Unless he/she agrees to a \$15,000 check for you FIRST! Teach them how valuable YOUR time is! It would

be good to boost the process of arterial decalcification by taking Vitamin K-2 with meals.

Bob Moriarty recently predicted a weighty stock market decline in October, and that PM stocks would take hits also. We'll see; however, since PM stocks are such a tiny percent of the entire equities market, combined with the fact of investors desperate for safe havens---a PM share decline may not play out. It may be instead a severe, aggressive uptick causing consternation in millions of investors led astray by chattering panels of "analysts" on national TV news shows. Chris Vermuelen also thinks PM miners stocks will be viewed as safe haven and see large investor [inflows](#). Much toilet tissue could be sold with images of Harry Dent on all the sections. How can he have any motive but to intentionally hurt investors?

A guest at 321 Gold recently voiced this PM shares skyrocketing opinion, which I find likely inasmuch as silver has been so savagely suppressed for so long (by old East coast Episcopalian dynasties loyal to England, the world source of monetary silver suppression since AD 1572) and currencies are weakening---

***"My opinion is do not trade silver bullion or silver stocks from here on out. Hang on for
"The potential ride of your life."***

When trend investors see rapidly advancing prices you'll be startled at the gains. Add to that the fact of large investment pools entering who were convinced silver was dead forever, you need to be mindful of some good cause to donate to. Hint---no cancer research

organizations; and no animal welfare groups using the word “humane,” those are invariably fronts for very flaky people.

We are being told of silver’s downside volatility by [voices](#) who appear to not have realized that governments have run out of silver to dump to crush the price. This downside volatility will not be seen going forward in such terms; moves south are likely to be much more mild than in bygone years. What has been true for generations will no longer apply to silver. Another well known figure also sees precious metals mining companies shares vaulting upwards rather than slumping in a general stock market decline

http://www.321gold.com/editorials/thomson_s/thomson_s_082719.html

You will still need to monitor news daily for adverse developments in countries where mining companies operate. Announcements (usually after trading hours) can be just as adverse as finding you bought shares in a company heavily hedged at low prices. Countries may decide they want a bigger piece of the pie. That is the big exception to his “don’t trade” suggestion. Remember “never sell” carries the penalty of never enjoying gains.

Democrats are more likely to legislate PM unfavorable bills and the worst politician ever to act against PM was Democrat Franklin Roosevelt. A Republican governor in Ohio recently signed a bill to tax bullion sales at 7%. It would be better to minimize the role of government and let private enterprise do the rest. And if PM is to be allowed to act as competing currency, it must not be subject to sales nor capital gains tax. Lastly, PM must be free to circulate in the hands of the public rather than be amassed in enormous vaults under government control.

In “Money and Man---A Survey of Monetary Experience” (University of Oklahoma Press, 4th edition, 1976, page 269) rare pro-PM economist Elgin Groseclose reflected on the nation he spent years in as a younger man---

“The experience of Iran is of interest. In 1294 AD, Kai Khatu, the Mongol ruler of Persia, on the advice of his vizier and in imitation of his brother monarch, Kublai Khan in China, introduced paper money into his realm. This action aroused such resentment among the merchants that **A RIOT ENSUED. THE VIZIER WAS SEIZED BY THE MOB, TORN TO PIECES, AND THROWN TO THE DOGS.** The edict establishing paper money was withdrawn and no Persian monarch until the twentieth century dared impose paper on his subjects. The standard of value and the common medium of exchange continued to be silver of high purity. **PAPER MONEY WAS AN ALIEN DEVICE** until 1931, when the modern minded Reza Shah introduced a national bank of issue and gradually withdrew and melted down the silver coinage in circulation. It is of interest to record that Reza Shah lost his throne just ten years later.”
